An annotated list of 90 liverwort species is compiled based on the results of studying the collections from Udokan Range. New data on the distribution of some rare species (*Bazzania tricrenata*, *Fuscocephaloziopsis loitlesbergeri*, *Gymnomitrium commutatum*, *Herbertus aduncus*, *Lejeunea alaskana*, *Scapania rufidula* etc.) in the Republic of Sakha and Russia are obtained. *Scapania verrucosa* was recorded for the first time in Siberia, *Anastrophyllum assimile* and *Tetralophozia filiformis* for the first time in Yakutia. The presented data give an essential addition to data on the distribution of the rare liverwort species in Russia.

Keywords: liverworts, ecology, distribution, rare species, Udokan Range, Republic of Sakha (Yakutia), Russia

ACKNOWLEDGEMENTS

I am particularly grateful to Lyudmila Vasilievna Kuznetsova, who helped make it possible to travel to a remote area of Udokan Range.

The research was carried out within the state assignment of Ministry of Science and Higher Education of the Russian Federation (theme No. 0297-2021-0023, reg. No. AAAA-A21-121012190038-0)
