Asterosiphon dichotomus, a rare species of terrestrial macroalgae, was found in the European Russia in the Vologda, Voronezh and Yaroslavl regions. The new records of the species allowed to clarify its distributional range in Europe and amend morphological description in terms of the width of photosynthetic filaments.

Keywords: *Asterosiphon*, soil algae, morphology, floristic records, European Russia

ACKNOWLEDGEMENTS

The results were obtained in the framework of the state assignment no. AAAA-A18-118012690096-1 “Diversity, structure and productivity of algal communities of freshwater ecosystems”.

The author acknowledges his colleagues for help during sampling, especially D.A. Philippov and A.S. Komarova, who provided the sample from the Vologda Region. Special thanks to reviewers for valuable comments on the manuscript.
