Information on the first finding of a rare unicellular green alga *Eremosphaera viridis* in the northeastern European part of Russia is given. The species was found in a spring bog of the Vychegda River basin. *E. viridis* was isolated as a unialgal culture and is maintaining in the collection of living algae cultures at the Institute of Biology, Komi Scientific Centre, Ural Branch of the Russian Academy of Sciences (SYKOA).

Keywords: *Eremosphaera*, floristic records, spring bog, northeast of the European part of Russia

ACKNOWLEDGEMENTS

This work was supported by the state tasks of the Institute of Biology, Komi Scientific Centre, Ural Branch of RAS (project AAAA-A19-119011790022-1), and Lomonosov Moscow State University (project AAAA-A16-116021660063-6, part 2 p. 01 10).
