New data on the distribution of 12 vascular plant species are given. Nine species are reported as new records for Amur Region (*Arctium minus* (Hill) Bernh., *Carduus acanthoides* L., *Sinapis arvensis* L., *Callitriche hermaphroditica* L., *Atriplex patens* (Litv.) Iljin, *Chenopodium virgatum* Thunb., *Thladiantha dubia* Bunge, *Cyperus difformis* L., *Leonurus cardiaca* L.); 8 of them are new for Lower Zeya floristic province and 1 species is new for Daurian floristic province. New findings of *Bolboschoenus planiculmis*, *Centaurea pseudomaculosa* and *Leucanthemum vulgare* are cited. The increasing number of alien species and their naturalization may be related to a large-scale development of both industrial sites and tourism.

**Keywords:** vascular plants, Amur Region, Lower Zeya floristic province, Daurian floristic province

### ACKNOWLEDGEMENTS

The field work of A.P. Sukhorukov in 2020 was supported by the RFBR expedition grant (project 18-04-00029-a), and his research was carried out in accordance with the scientific programme 121032500084-6 of the Department of Higher Plants, Lomonosov Moscow State University. The authors thank V.Yu. Barkalov (Federal Scientific Center of Biodiversity, Far East Branch of Russian Academy of Sciences) for the identification of *Centaurea pseudomaculosa* and G.Yu. Konechnaya for valuable suggestions on the first draft of the paper.
