Potentilla centigrana Maxim. and *P. paradoxa* Nutt. ex Torr. et Gray are recorded for the first time for the flora of Sakhalin Island. Information on their localities in Sakhalin, general geographical distribution and habitat characteristics is provided.

Keywords: new species, flora, *Potentilla*, Sakhalin Island

ACKNOWLEDGEMENTS

The studies were carried out as part of the implementation of the state assignment of the IMGG FEB RAS on the theme “The impact of natural factors and economic activities on biodiversity and ecosystem components in active geodynamic zones of Sakhalin and the Kuril Islands” (state registration No. 115012770156). Materials of the Herbarium of vascular plants, lichens and mosses of the IMGG FEB RAS (SAK) were also used for the work performance.
