The data on new records of seven *Alchemilla* species in the Chelyabinsk Region are presented. Two species (*A. confertula* and *A. zolotuchinii*) were revealed in the region for the first time. New localities were registered of *A. amphipsila*, *A. cinerascens*, *A. hians*, *A. iremelica*, and *A. samuelssonii* known as rare or quite rare species in the region.

**Keywords:** apomictic species, floristic records, lady's mantle, "Taganay" National Park

### ACKNOWLEDGEMENTS

The work was carried out within the framework of the state assignment of the Federal State Budgetary Institution "Russian Academy of Sciences, Ural Branch: Institute Botanic Garden", with the support of the grant of the Russian Foundation for Basic Research No. 20-04-00183.
