Information on the findings of 11 *Alchemilla* species in the Republic of Mordovia is provided. Five species were revealed in the region for the first time: *Alchemilla longipes*, *A. mininzonii*, *A. psiloneura*, *A. sibirica*, and *A. tichomirovii*. The data on the discovered localities of six species rare or infrequent in Mordovia, *A. cheirochlora*, *A. cymatophylla*, *A. dasycrater*, *A. kemlensis*, *A. vorotnikovii*, and *A. zimoenkensis* – are presented.

Keywords: *Alchemilla*, apomictic species, floristic records, lady’s mantle, Mordovia

ACKNOWLEDGEMENTS

This work was carried out within the framework of the state assignment of the Federal state budgetary scientific institution “Botanic Garden of the Ural Branch of the Russian Academy of Sciences”, and with support from the Russian Foundation for Basic Research, grant № 20-04-00183.
