The article provides information about the discovery of an alien species *Allium neapolitanum* Cirillo, new to the flora of the Caucasus (Azerbaijan, Baku). Morphological description of the species, information on the found population and characteristics of the phytocoenose are given.

Keywords: *Allium neapolitanum*, Caucasus, Azerbaijan, Absheron Peninsula, alien species, environmental weed

ACKNOWLEDGEMENTS

The work was carried out within the framework of the topic “Analysis of the structural and chorological diversity of higher plants in the context of problems of their phylogeny and taxonomy; problems of urban ecology and sustainable development” (CITIS: 121032500084-6).
