The data on the new records of six *Alchemilla* species new for the Chelyabinsk Region are presented. *Alchemilla auriculata*, *A. filicaulis*, *A. nemoralis*, *A. oxyodonta*, *A. schmakovii*, *A. stellaris* were revealed in the region for the first time. One of them, *A. nemoralis*, was earlier noted for the region based on erroneously identified specimens.

Keywords: apomictic species, floristic records, lady's mantle, "Taganay" National Park

ACKNOWLEDGEMENTS

The work was carried out within the framework of the state assignment of the Federal State Budgetary Institution "Institute Botanic Garden of the Ural Branch of the Russian Academy of Sciences", with the support from the Russian Foundation for Basic Research, grant No. 20-04-00183. We thank the staff of the "Taganay" National Park, especially E.G. Novosyolova and M.S. Sereda, and also P.A. Slepukhin (I.Ya. Postovsky Institute of Organic Synthesis of the Ural Branch of the Russian Academy of Sciences) for help in arrangement of field research.
