The data on new localities, distribution and ecology of 12 vascular plant species, including 11 species listed in the Red Data Books of Primorye Territory (2008) and the Sakhalin Region (2019), as well as the Red Data Book of the Russian Federation are presented. One species is recommended to include in the next edition of the Red Data Book of Primorye Territory, and 4 species deserve to be included in the Red Book of the Russian Federation.

**Keywords:** natural flora, vascular plants, rare species, new localities, Primorsky Krai

### ACKNOWLEDGEMENTS

The authors are grateful to Senior Researcher of the Federal Scientific Center of the East Asia Terrestrial Biodiversity, Far Eastern Branch of the Russian Academy of Sciences, Ph.D. V.V. Yakubov for consultations during the preparation of this article.

The research was carried out within the framework of the state assignment of the Ministry of Science and Higher Education of the Russian Federation (No. 121031000117-9) and Botanical Garden-Institute of the Far Eastern Branch of the Russian Academy of Sciences within the framework of the project “Introduction to the culture, study and conservation of genetic resources of economically valuable plants of East Asia” (No. 1021060207393-6-1.6.11).
