Data on 11 vascular plant species and one hybrid new to the flora of the Ivanovo Region are presented. The hybrid, *Ranunculus circinatus* Sibth. × *R. kauffmannii* Clerc, and 5 species (*Geranium sanguineum* L., *Potamogeton rutilus* Wolfg., *Seseli annuum* L., *Sparganium glomeratum* (Laest. ex Beurl.) Neuman, *Thymus pulegioides* L.) are native, the other 6 species (*Anemone canadensis* L., *Cardamine hirsuta* L., *Eragrostis albensis* H. Scholz, *Geranium macrorrhizum* L., *Gilia capitata* Sims, *Wolffia arrhiza* (L.) Horkel ex Wimm.) are aliens.

Keywords: vascular plant species, alien species, hybrids, Ivanovo Region

ACKNOWLEDGEMENTS

The study was carried out with in the contract with the Department of Nature Resources and Ecology of the Ivanovo Region (state contract 19/21 of 2.06.2021) and the state assignment of the I.D. Papanin Institute for Biology of Inland Waters RAS (№ 121051100099-5). We express our sincere gratitude to A.A. Bobrov, E.V. Chemeris, S.R. Mayorov, A.V. Leostrin and A.P. Seregin for examining herbarium materials and help with identification of some species.
