Five species (*Biatoridium monasteriense*, *Lepraria elobata*, *L. vouauxii*, *Muellerella hospitans*, *Ochrolechia parella*) are reported as new to the lichen biota of Dagestan. The genus *Biatoridium* and species *Muellerella hospitans* were not previously known in the East Caucasus. Information on the distribution of each species in the Caucasus and Russia with data on localities and some comments is given.

*Keywords:* lichens, lichenicolous fungi, floristic records, East Caucasus, Russia

### ACKNOWLEDGEMENTS

The author is grateful to I.N. Urbanavichene (Komarov Botanical Institute RAS) for help with identification of lichen substances. The study was carried out within the framework of the research project of the Mountain Botanical Garden of DFRC RAS No. AAAA-A19-119020890099-4.
