

NEW SPECIES TO THE FLORA OF THE SAKHALIN ISLAND

N. D. Sabirova^{a,#} and R. N. Sabirov^{a,##}^a Institute of Marine Geology and Geophysics of FEB RAS
Nauki Str., 1B, Yuzhno-Sakhalinsk, 693022, Russia[#]e-mail: n.sabirova@imgg.ru^{##}e-mail: r.sabirov@imgg.ru

DOI: 10.31857/S000681362210009X

Information is provided on 15 vascular plant species new to the Sakhalin flora: *Acalypha australis* L., *Aegopodium podagraria* L., *Amphicarpaea japonica* (Oliv.) B. Fedtsch., *Asarum europaeum* L., *Astragalus uliginosus* L., *Dollingeria scabra* (Thunb.) Nees, *Cirsium vlassovianum* Fisch., *Geranium wilfordii* Maxim., *Ficaria verna* Huds., *Inula salicina* L., *Kalimeris incisa* (Fisch.) DC., *Paraixeris denticulata* (Houtt.) Nakai, *Plagiorhegma dubium* Maxim., *Sanicula chinensis* Bunge, *Senecio argunensis* Turcz. Their localities and habitats are specified, as well as some data on their distribution in the region.

Keywords: flora, vascular plants, alien species, Yuzhno-Sakhalinsky floristic district, Sakhalin Island

ACKNOWLEDGEMENTS

The research was carried out within the framework of the state assignment of the Institute of Marine Geology and Geophysics (IMGG) FEB RAS “The influence of natural factors and economic activity on biodiversity and ecosystem components in the conditions of active geodynamic zones of Sakhalin and the Kuril Islands” and “A comprehensive assessment of the impact of environmental factors on the geosystems of Sakhalin and the Kuril Islands”. Materials from the Herbarium of vascular plants, lichens and mosses of IMGG FEB RAS (SAK) were also used in the performance of the work.
